This example shows that how to use the Canvas Class in a Form. In this example we take two field in which integer number passed from the form and result will display on a Canvas circle.

Creating Canvas Form Example

<-Prior

Index

Next->

This example shows that how to use the Canvas Class in a Form. In this example we take two field in which integer number passed from the form and result will display on a Canvas circle. The Following methods are used in this example:

getWidth()

getHeight()

setColor()

fillRect()

setGrayScale()

drawString()

We calculate the both integer value ("A" and "B") in the calculator() function and store the result in a integer value ("result") variable which is integer value.
