Technology

In the given example, you will learn about the thread and how thread works in J2ME application. An application can run multiple activities simultaneously using thread.

J2ME Thread Processing Example

<-Prior Index Next->

In the given example, you will learn about the thread and how thread works in J2ME application. An application can run

multiple activities simultaneously using thread. Here we have defined different states of thread...

The states of Thread is:

running:- Executing code.

ready:- Ready to execute code.

suspended:- Waiting on an external event.

terminated:- Finished executing code.

In the output First of all **process()** thread will be executed then **start()** thread and then **run()** thread will be executed.

The Application is as follows:
